

PILOT LAMPS

Our range of popular pilot lamps used in automotive and universal applications. They are quality made units that feature globe replaceable or LED types and feature quick connectors.

When selecting a globe, do not exceed the recommended wattage as excess heat will damage the unit. Listed are suggested globes for use in these pilot lamps that will not damage the unit, will provide ample illumination, fit correctly and provide a long service life.

LED types feature sealed diodes, multi-volt operation and two-stage lens for easy viewing in the dark and daylight.

We are able to custom manufacture many types of legend plates. Contact us for more details.

This page should be used in conjunction with our distribution catalogues to cover almost any application.

24715

Pilot lamp - Green
Replaceable globe.
Snap-fit design.
6.4mm Q.C. terminals.
Requires BA7s globe
12/24V@2W max.
